

# Epo-Grip

# *Mache Magic*

Epo Grip Mache Magic is a innovative time saving filler designed to be used for tissue rebuilding applications. This two component system is easily mixed and initial curing occurs in 6-10 minutes at 77 degrees F. Excellent for replacing cheek flesh, building gum lines, tongues, installing jaw sets, rebuilding transition areas and even casting small parts.

Mache Magic is a ready to use product that can be easily tinted, providing application flexibility not previously found in other methods. This material can be used regardless if the piece is wet or dry. With latex gloves and the aide of a little soap and water the material can be smoothed and feathered to reducing finish work in transition areas. For casting small parts, after 20-30 minutes, the cast part can be finish sanded or carved to shape.

Mache Magic is available in 8oz, 16oz, Quart, and Gallon size units
